Experience

Mopson MMC

Multi-optional platform for solutions and needs

02.2026-present

- Developed and maintained full-stack web applications as a Full Stack Developer, with a primary focus on backend development using PHP and Laravel
- Built and maintained RESTful APIs to support both admin panel interfaces and mobile applications, following MVC architectural patterns
- Contributed to the development of multiple live service platforms including courier, taxi, restaurant, grocery, and pharmacy management systems
- Collaborated in an agile development environment to deliver scalable, multi-domain service solutions with plans for continued platform expansion

Bionet MMC

Full-Stack Developer

08.2025-02.2026

EMS - Cargo & Logistics Management System

- Designed and developed the backend architecture of a custom EMS-based cargo management system
- Implemented core business logic for shipment processing, order lifecycle, payment handling, and status workflows
- Built secure and scalable RESTful APIs for frontend consumption and third-party service integration
- Designed and optimized relational database schemas to ensure data integrity and performance
- Implemented authentication, authorization, and role-based access control
- Added system-level features including logging, audit trails, and Excel import/export
- Optimized application performance and ensured maintainable, modular code structure

GLB Soft - Warehouse Management System

- Developing a scalable warehouse management system with a modular and extensible backend architecture
- Implemented core business logic for product management, warehouse operations, stock control, and inventory movements
- Designed a company-based data isolation structure to ensure secure multi-tenant data handling
- Built secure authentication and authorization mechanisms, including role-based access control
- Developed an API-first backend architecture to support seamless frontend and third-party integrations
- Optimized database structure and queries to improve system performance and data consistency

Experience

Bionet MMC BSC – Baku Services Company

08.2025–02.2026

- Provided technical support and maintenance for corporate web systems and internal platforms
- Assisted in resolving backend and database-related issues, including data consistency and system errors
- Supported content updates, system configurations, and routine operational tasks
- Collaborated with development teams to identify issues and ensure system stability
- Performed basic performance monitoring and issue reporting

Bionet MMC MDTF– Mənəvi Dəyərlərin Təbliği Fondu

08.2025–02.2026

- Developed and maintained a full stack government web platform using the MVC architectural pattern
- Designed and implemented structured content management workflows for articles, categories, and informational pages
- Built clean controller–service–model layers to ensure separation of concerns and maintainable code
- Worked on both frontend and backend components, including UI rendering, forms, and administrative panel features
- Designed and optimized relational database schemas for data integrity and long-term stability
- Implemented authentication, authorization, and role-based access control according to government standards
- Ensured overall system stability, performance, and compliance with coding best practices

Bionet MMC Orhun Door Web Platform Support Full-Stack Developer

08.2025–02.2026

- Provided ongoing support and maintenance for the company's web platform
- Assisted with content management, system updates, and bug fixes
- Supported backend-related tasks and ensured proper system functionality
- Coordinated with stakeholders to resolve technical issues in a timely manner
- Ensured platform availability and smooth day-to-day operation

Raf Consulting Services

Full-Stack Developer

Freelance

Official corporate website for a Baku-based accounting and financial consulting firm. Designed and developed a fully trilingual (Azerbaijani, English, Russian) platform showcasing the company's service portfolio, industry expertise, and client engagement model. Features include dynamic content management across three languages, responsive design, and optimized search engine visibility.

A Smart Platform for Ordering and Tracking Farm Products Agro Express

03.2025 – 04.2025

- Development and management of a web-based logistics platform for agricultural product delivery.
- Design and implementation of order tracking, delivery scheduling, and user management features.
- Integration with mapping and notification services for real-time updates.
- Database optimization and improvement of platform performance and usability.

EDM – Electronic Data Management System Azerishiq OJSC

02.2025 – 03.2025

- Development and management of a web platform for electric vehicle charging stations.
- Complete setup, optimization, and updating of frontend and backend components.
- Developing APIs and integrating with third-party services.
- Optimizing website performance and enhancing user experience.

Junior Full Stack Developer Azerishiq OJSC

09.2024–03.2025

- Built and maintained backend and frontend systems, and implemented new features into existing platforms
- Created REST APIs and connected them to databases using Laravel, PHP, or other backend technologies
- Designed and implemented user interfaces using HTML, CSS, JavaScript
- Worked with MySQL or PostgreSQL to store, retrieve, and optimize data
